

EC-ST Series Principle of Construction

Utilizing sedimentary flow separation technology Invention Patent

Main applications

- CNC machining centers, NC lathes, milling machines, CNC lathes, grinding machines, drilling machines, hobbing machines, electric discharge machines, die-casting machines, parts cleaning machines, cold heading machines, quenching equipment, forging equipment, plastic forming machines, glass lens processing and grinding equipment, Food Machinery, etc.

Other machinery, equipment and systems generating oil mist, water mist, fumes, mixed dust and odors

Tips: Scanning the advantages and disadvantages of similar products

- ★ Effective absorption capacity
- ★ Effective purification capacity
- ★ Continuous treatment capacity (Description: Inferior similar products this ability is weak, very short time will be clogged, lose the ability to absorb; Either the absorbed oil mist again discharged to the workshop, lose the ability to purify)
- ★ Assuming that the above three capabilities are comparable, focusing on the energy-saving capabilities, technology advantages and disadvantages brought about by the comparison of operating costs
